Contents

1 Lists **2**

2 Tables and Colors **2**

3 Figures **3**

3.1 Pictures: Rotation and Cropping 3

3.2 Multiple Images 3

Table 1: Comparison of different technologies

Language	Requires compilation	Output	Use
C/C++	Yes	Executable	To make apps
LaTeX	Yes	PDF	To make documents
HTML/CSS/JS	No	Webpage	To make websites
2.5 cm	2 cm	2 cm	3.5 cm

1 Lists

Following are some technologies that can be used to format content:

- LaTeX
- HTML (+CSS)
- Markdown

You would most likely use LaTeX in the following scenarios:

1. To write research papers.
2. To embed math equations within other software (e.g. GDocs, HTML etc.).
3. To create your CV, project reports and presentations.

There are three main categories of electronic markup:

Presentational Used by traditional word-processing systems: binary codes embedded within document text that produce the WYSIWYG (what you see is what you get) effect. e.g. Microsoft Word.

Procedural Markup is embedded in text which provides instructions for programs to process the text. e.g. TeX.

Descriptive Markup is specifically used to label parts of the document for what they are, rather than how they should be processed. e.g. LaTeX, HTML5.

2 Tables and Colors

Code for Table 1 is written in this subsection. However, it will be rendered on a special page. The table is positioned at the top of a page using the optional float argument.

Colors can be represented using RGB values or hexadecimal notation in HTML.

A custom color is defined using 200 red, 20 green and 200 blue:

```
\definecolor{custompurple}{RGB}{200,20,200}
```

Another custom color is defined using 60% red and 40% yellow:

```
\colorlet{customorange}{red!60!yellow}
```

The following equation uses the custom colors:

$$T(n) = aT(n/b) + f(n)$$

3 Figures

3.1 Pictures: Rotation and Cropping

The MNIT logo is rotated using the graphicx package.

Figure 1: MNIT logo

The MNIT building image is cropped using the trim and clip options. The top portion of the image is cropped to remove the sky, and the image is fitted to the text width.

Figure 2: This is a floating image and can appear anywhere.

3.2 Multiple Images

This subsection includes two minipages with equal width.

Figure 3: This is the first minipage

Figure 4: This is the second minipage
