1 Introduction **2**
1.1 Background 2
1.2 A Numbered List 2

2 Science! **2**

3 Equations and Cross-References **2**

1 Introduction

Words are separated by one or more spaces. Paragraphs are separated by one or more blank lines. The output is not affected by adding extra spaces or extra blank lines to the input file.

$\beta = a^2 + b \times c + 2$

1.1 Background

In Section 1, double quotes are typed like this: "quoted text".

Single quotes are typed like this: 'single-quoted text'.

Long dashes are typed as three dash characters—like this.

Italic text is typed like this: *This is italic text.*

Bold text is typed like this: **This is bold text**.

1.2 A Numbered List

1. First item
2. Second item
3. Third item

Theorem 1.1. *There are infinitely many prime numbers.*

In Theorem 1.1, we state that there are infinitely many prime numbers.

2 Science!

Einstein's famous mass-energy equivalence equation is $E = mc^2$. This equation describes the relationship between mass and energy [**?**].

3 Equations and Cross-References

The time-dependent Schrödinger equation is given by Equation 1. Schrödinger's 1926 paper discusses the foundations of wave mechanics [**?**].

$$i\hbar\frac{\partial}{\partial t}\Psi(\mathbf{r},t) = \left[-\frac{\hbar^2}{2\mu}\nabla^2 + V(\mathbf{r},t)\right]\Psi(\mathbf{r},t) \tag{1}$$
